SUMMARY

B.Tech  CSE (AI & ML) student with hands-on experience in Python, machine learning, and AI/GenAI application development. Experienced in building practical projects involving REST APIs, LangChain, RAG pipelines, FAISS, and AI-powered applications, with a strong foundation in backend development and data processing. Familiar with HTML, CSS, Python-based development, and API integration, with a strong interest in developing scalable cloud-based applications. Eager to apply problem-solving skills, learn Django and Flask in a professional environment, and contribute to real-world Python development projects.

PROFESSIONAL EXPERIENCE

DevElet , Gen AI Developer 2025 – 2026 | hyderabad
walkedin as an intern and build two real time Generative AI projects using RAG pipeline

tghub , python web developer&Front-end developer

EDUCATION

Intermediate, SR junior college 2023 – 2025

Malla reddy Vishwavidyapeeth(deemed to be university), B-Tech 08/2025 | Hyderabad,India

SKILLS

- | | | | |
|----------------------|-----------|-------------------|--------------|
| • Python | • CSS | • Html | • Javascript |
| • RestAPI | • FastAPI | • Flask | • Django |
| • ML | • Gen ai | • Langchain | • RAG |
| • Prompt Engineering | • FAISS | • Data Processing | • Mysql |

LANGUAGES

English fluent	Hindi conversational	telugu native
--------------------------	--------------------------------	-------------------------

COURSES

Python Development, Coursera 06/2026 – 09/2026 | hyderabad
Developed a strong foundation in Python programming, object-oriented programming, data structures, exception handling, file handling, and modular application development. Gained hands-on experience in building Python applications, working with APIs, processing data, debugging code, and applying Python to real-world development tasks.

Generative Ai, DevElet 11/2025 – 01/2026 | Hyderabad, India
Learned Generative AI, LLMs, prompt engineering, embeddings, RAG, vector databases, and LangChain through hands-on AI application development using Python.

PROJECTS

Customer support chatbot , an bot which can answer the question according to company requirements 02/2026 – 03/2026
An AI-powered customer support chatbot that answers user queries using company FAQs and documentation. The chatbot uses a local LLM through Ollama and Retrieval-Augmented Generation (RAG) to provide accurate and contextual responses.and i used the tech like **Python,Streamlit,Ollama,LangChain,ChromaDB**, by this project i have learned the how actually the chatbot works by using the python

Ai code Generator , ai code generator using the User Prompt
ive made an ai code generator which ca automatically generates the code by using the tech stacks Python,Streamlit,LangChain,Ollama,CodeLlama / DeepSeek-Coder and by this project i have learned the how actually RAG works and how can i train the ml model

INDOSOL , Industrial Intelligence Platform 08/2026
A premium enterprise-SaaS product page **plus a working analysis engine**, delivered as **one self-contained, offline, single-scroll HTML file** using the tech like python for simplifying,that can actually used for the industrial men and it can simple finds the anomaly in the item using the technology and it also contains the pre-trained ai model which is used for anaysing the raw data and give the one report for the industrial owner

INTERESTS

- | | | |
|---------------------------|------------------------------------|--------------------|
| • Creating Ai automations | • Developing Python based webpages | • Chatbot Creation |
| • Creative Webpages | • Chess | • Sudoku |
